Deep-Sky Companions: The Caldwell Objects

By Stephen James O'Meara

The second in our Deep-Sky Companions series, this book is the ultimate guide to Patrick Moore's catalog of 109 star clusters, nebulae, and galaxies that didn't make it into the Messier list. Superior finder charts, exquisite astrophotos, and eloquent, provocative essays make this a must-read. Steve O'Meara's hand-drawn sketches solidify his reputation as one of the greatest visual observers of our time. With a foreword by Patrick Moore.
